

## New hard milling machine

2012-02-15

Hard milling machine Mikron HSM 800

Our comprehensive tooling machinery was extended by a Mikron HSM800 hard milling machine. The machine has high spindle speeds, high feed rate and excellent acceleration, which is especially important when working with small cutter diameters.

High Speed Cutting enables us mill complex geometries very precisely. In comparison with other production techniques the effort for post-processing is considerably reduced. Tool components can be manufactured in a single clamping.

Hard milling shortens production times and costs. Additionally dry machining is ecologically more sustainable than other production techniques.

Maximum spindle speed: 54.000 1/min

Pallet changer
